

FRIEDMAN

BE-OD

Thank you for choosing our BE-OD pedal, based on the legendary Friedman BE-100 amplifier.

Bass, Treble, Volume, Gain:

we know you know what these are.

Pres:

presence contours the ultra high frequency content

Tight:

shapes the low frequency content. Turning it up tightens the sound.

Internal gain trim pot:

turn down for less gain if less overdrive is needed.

True Bypass

9-18V Center Negative

INTERNAL GAIN ADJUSTMENT

Adjusting Gain:

The Friedman BE-OD has an internal trim pot preset to 12 O'clock (middle) which adjusts the overall gain of the pedal. To increase or decrease the overall gain, please follow these instructions:

1. Use a small philips screwdriver to remove the bottom cover.
2. Using a small flat head screwdriver turn the trim pot counter clockwise to achieve less overall gain or clockwise to achieve higher overall gain.
3. Re-install the bottom cover and enjoy the Friedman BE-OD.
